Basic Auton NEAR: LEAVE + PARK (WMS Irondogs)

Start against our alliance wall, next to the LOADING ZONE. OpModes: "Basic Auton RED NEAR" and "Basic Auton BLUE NEAR".

Filled box = START (arrow = front of robot). Numbered circles = waypoints, driven in order. Dashed box = where it PARKS.

Robot size used: 17.98 x 15.99 in (BasicAuton.ROBOT_LENGTH_IN / ROBOT_WIDTH_IN). Blue = Red rotated 180° (decision 011).

The steps (from BasicAuton.java, in inches)

Step	RED x, y, heading	BLUE x, y, heading	What happens
Start	60, 64.005, 0°	-60, -64.005, 180°	Robot set up here. Nothing moves during INIT
1	60, 50, 0°	-60, -50, 180°	LEAVE: slide right, off the red wall
2	40, 61, 0°	-40, -61, 180°	PARK: in the wall end of the LOADING ZONE (zone: x 24.5 to 47.5, y 61 to 72)

Test log: 5 good runs in a row = ready for competition

Run	Red / Blue	Delay (s)	Parked? (Y/N)	Lights	Time (s)	Notes (overshoot, short, bumped...)
